

SERVICE BRIEF

Point-of-Sale Technologies

Connect with website visitors, generate sales leads, and expand your client base.

Security and Compliance

Ensure compliance with PCI and other regulations.

We live in a consumer-based society. People spend money on goods and services every day. Yet, the systems that retailers use in order to process payments must meet stringent requirements that are often convoluted and difficult to understand.

Furthermore, they often use outdated technology that is inefficient, unreliable, and difficult to work with. If your organization fits into the hospitality, entertainment, or service industries, you're just the right fit for a new type of point-of-sale terminal.

Thanks to innovations in the technology industry, point-of-sale (POS) systems have evolved from traditional cash registers to high-tech terminals capable of streamlining operations and improving accuracy. Virtual Business Solutions' skilled technicians want to help you ensure that the POS systems that your organization relies on to keep operations moving are secure and maintained.

Since POS systems are connected to an internal network, they can collect data and store it in a central location. Any systems that are used for storing credentials or accepting payments need to be optimized for security and compliance with various privacy regulations designed to protect the identities of consumers. Virtual Business Solutions' technicians have the skill and knowledge necessary to make this happen.

Reliable and Maintained Systems

Experience minimal downtime to optimize operations.

Unlike traditional cash registers, POS terminals need to be maintained by skilled technicians who understand their intricacies. By working with Virtual Business Solutions, your systems will be handled by professional technicians who understand how this technology works. We'll work behind the scenes to ensure that your POS systems are in tip-top shape, reducing the probability of wasteful downtime.

Real-Time Inventory and Profits Analysis

Open up new and powerful opportunities for your business with detailed client information Track your progress and profits throughout the day.

Traditional POS systems, like the cash register, are often prone to user error due to entering in wrong prices or mishandling cash. While these threats still exist with computerized payment systems, they aren't nearly as difficult to handle for the average user. Many POS systems have been streamlined to buttons for individual items, and can print out profit reports at the end of the day to ensure profitability.
